Languages:

TypeScript, JavaScript, Python,
Java, C#, PHP, SQL, HTML5,
CSS3

Frameworks:

Next.js, React, Laravel, Flutter,
Tailwind CSS, Express.js

Backend & DB:

Node.js, MySQL, PostgreSQL,
SQLite

Cloud:

Azure Services

Tools:

Docker, Git, GitHub, Postman,
Android Studio

Profile

Proactive Software Engineer and Information Technology student with hands-on experience building scalable applications, AI-integrated systems, and robust database architectures. Skilled across a comprehensive tech stack including TypeScript, PHP, Java, and Node.js. Proven track record in managing the full software development lifecycle, engineering complex backend relationships, and delivering responsive, user-focused solutions across various domains.

Experience

Project Manager & System Architect | SECURX (Capstone)

- Developed a secure digital prescription system designed to eliminate forged prescriptions and streamline the outpatient workflow.
- A defining feature of the system is its clinical documentation engine. SecuRx replaces manual typing with an AI Transcriber and AI Assisted SOAP Notes Generator, utilizing Microsoft Azure AI Services.
- Managed the full software development life cycle (SDLC), from initial architectural planning to formal system documentation and testing.
- *Tech Stack: Laravel (PHP), MySQL, JavaScript, Azure AI Services*

Full-Stack Developer | RYB Vehicle Trading Website

- Developed a dynamic e-commerce platform for vehicle trading, allowing users to browse, filter, and inquire about vehicle listings

Education

Angeles University Foundation

Information Technology
Expected 2027

STI College Balibago

Senior High School

Chevalier School

High School
2021

Hobbies

Basketball, running, and coding

in real-time.

- Built a robust content management system (CMS) on the backend to manage vehicle specifications, pricing, and high-resolution image galleries.
- Implemented advanced filtering and search functionality using JavaScript to enhance user experience and site navigation.
- Designed a responsive frontend interface to ensure a seamless browsing experience across mobile, tablet, and desktop devices.
- Managed database migrations and complex relationships in MySQL to handle diverse vehicle categories and user-generated inquiries.
- *Tech Stack: Laravel, MySQL, JavaScript, Tailwind CSS*
